

### Combination possibilities of dSPACE software

If you want to install an additional dSPACE product, it must be possible to install the additional software after the software already installed in the folder. This depends on the release date of the software products.

- Only combinations that comply with these installation orders will work properly.
- The installations are listed in the dSPACE Installation Manager (all) and the *Add/Remove Programs* list of the Windows Control Panel (only the active installation). Since installations are listed alphabetically and not chronologically, do not forget to make a note of the order in which you combined the dSPACE software. Otherwise, it will be difficult to reconstruct the installation order later on.

If you did not change the installation's identifier in the dSPACE Installation Manager, you can easily get the installation order there.

The table below shows you which installation orders will work.

The information in the table is not relevant for SystemDesk, ControlDesk Next Generation, TargetLink as of TargetLink 3.2, and Model Compare as of Model Compare 2.1.

Combination Is Possible When Installing dSPACE Software ...	After dSPACE Software ...
